Membuat Forum Chat dengan Codelgniter (Free Download)

Kangpepe.com | Pada kesempatan kali ini saya akan membagikan tutorial dan App secara gratis untuk teman-teman kelascoding semuanya. Pada kempatan kali ini saya melakukan experimen dengan Codelgniter dan Bootstrapt yang bisa menampilkan sebuah website secara Responsive baik smartphone maupun dekstop.

Chate forum ini saya kembangkan menggunakan Template KP-LTE yang awalnya saya buat dan kembangkan menggunakan Bootstrapt. Adpun untuk Frameworknya menggunakan Codelgniter 3..0.3 dan forum ini merupakan rekayasa bagaimana interaksi secara langsung antara sesama members suatu forum. Bagi yang ingin mengmbangkanya silahkan dikembangkan kembali namun jangan **diperjual belikan** (dapat dibagikan tanpa memungut recehan), ini demi kemajuan para developer basic inindonesia yang berkualitas.

Baik sekarang kita mulai membuat APP Chatnya, dan mulai melakukan pembuatan database terlebih dahulu, silahkan create database namenya (ci_chat), dan import Query dibawah ini untuk membuat tabel database.

```
CREATE TABLE `chat` (
   `chat_id` int(11) NOT NULL,
   `send_to` int(5) NOT NULL,
   `send_by` int(3) NOT NULL,
   `message` tinytext NOT NULL,
   `time` timestamp NOT NULL DEFAULT CURRENT_TIMESTAMP ON UPDATE
CURRENT_TIMESTAMP
) ENGINE=InnoDB DEFAULT CHARSET=latin1;
```

```
INSERT INTO `chat` (`chat id`, `send_to`, `send_by`, `message`, `time`)
VALUES
(28, 2, 4, 'Assalamu''laikum kang pepe, saya mau konsul sedikit tentang CMS
Codepedia boleh kang ?', '2017-07-12 04:36:29'),
(29, 2, 5, 'Babang @pepe , saya mau tanya , untuk nambahin controller.admin
pada cms codepedia gmna ya ?', '2017-07-12 04:37:31'),
(30, 5, 2, 'oke dedek .... mulai belajar terlebihdahulu di tutorialnya
http://kangpepe/p/codepedia.html\n\nsilahkan pelajari dahulu disana',
'2017-07-12 04:57:55'),
(32, 4, 2, 'Ya mas @marco - apa yg bisa kita mulai dari pertanyaanya ?',
'2017-07-12 04:58:21'),
(33, 4, 2, 'Okey', '2017-07-12 04:58:34');
CREATE TABLE `users` (
  `id` int(4) NOT NULL,
  `name` varchar(200) NOT NULL,
  `username` varchar(32) NOT NULL,
  `password` varchar(64) NOT NULL
) ENGINE=InnoDB DEFAULT CHARSET=latin1;
INSERT INTO `users` (`id`, `name`, `username`, `password`) VALUES
                   'Delia
                                        Yunita',
                                                                'delia',
'$2y$10$qm8znIyAw30yDsGFdsPIueRy2X0TmQmfiw5IFnJqyc55Eqd21hSWS'),
   'N.Hardiansyah Al
                                                Fatih',
                                                                 'pepe',
'$2y$10$qm8znIyAw30yDsGFdsPIueRy2X0TmQmfiw5IFnJqyc55Eqd21hSWS'),
                   'Ahmad
                                        Ridha',
                                                                'ridha',
'$2y$10$qm8znIyAw30yDsGFdsPIueRy2X0TmQmfiw5IFnJqyc55Eqd21hSWS'),
                  'Marco Nusiver',
                                                                'marco',
'$2y$10$gm8znIyAw3OyDsGFdsPIueRy2X0TmQmfiw5IFnJqyc55Eqd21hSWS'),
                  'Anggun
                                        Sophia',
                                                                'anggun',
'$2y$10$qm8znIyAw30yDsGFdsPIueRy2X0TmQmfiw5IFnJqyc55Eqd21hSWS');
```

Selanjutnya buat halaman Welcome.php pada Controller yang seperti biasa dan lakukan penyimpanan pada directori controllernya, untu source codenya anda dapat mengubag isi dari file Welcome.php seperti code dibawah ini :

```
defined('BASEPATH') OR exit('No direct script access allowed');

class Welcome extends CI_Controller {
    public function __construct()
    {
        parent::__construct();
        $this->load->library('session');
        $this->load->database();
        $this->load->helper(array('url', 'form'));
    }

    public function index()
    {
        if (isset($_POST['username']))
        {
            $username = $this->input->post('username', true);
        }
}
```

jkj

```
$password = $this->input->post('password', true);
            if ($username !== '' && $password !== '') {
                $db = $this->db->get where('users', array('username')
$username), 1)->row();
                if
                      ($db
                              !==
                                    null
                                            & &
                                                  $db
                                                         !== false
                                                                          & &
password verify($password, $db->password)) {
                    $newdata = array(
                            'user id' \Rightarrow $db->id,
                            'username' => $username,
                            'logged in' => TRUE
                    );
                    $this->session->set userdata($newdata);
                    redirect('chat', 'refresh');
                }
            }
        $this->load->view('login');
   public function logout()
        $this->session->sess destroy();
        redirect('welcome');
    public function created()
        echo"<h3>PEPE</h3>";
        redirect('welcome');
}
```

Selanjutnya masih dalam directori Controller buat file kedua dengan nama file **Chat.php** File ini nantinya yang melakukan aktivitas dalam App yang kita buat, untuk kejelasanya dapat dilihat code dibawah ini :

```
class Chat extends CI_Controller
{
   public $user;

   public function __construct()
    {
        parent::__construct();
        $this->load->library('session');
        $this->load->database();
        $this->load->helper(array('url', 'form'));
        $this->load->library('user_agent');

        if (!isset($this->session->userdata['logged_in']) || $this->session->userdata['logged_in'] === false) {
            redirect('welcome');
        }

        $this->user = $this->db->get_where('users', array('id' => $this->session->userdata['user_id']), 1)->row();
    }
}
```

```
public function index()
        $teman = $this->db->where('id !=', $this->user->id)->get('users');
        $this->load->view('chat dashboard', array(
           'teman' => $teman
        ));
    public function getChats()
        header('Content-Type: application/json');
        if ($this->input->is ajax request()) {
            // Find friend
            $friend = $this->db->get where('users', array('id' => $this-
>input->post('chatWith')), 1)->row();
            // Get Chats
            $chats = $this->db
                ->select('chat.*, users.name')
                ->from('chat')
                ->join('users', 'chat.send by = users.id')
                ->where('(send by = '. $this->user->id .' AND send to = '.
$friend->id .')')
                ->or where('(send to = '. $this->user->id .' AND send by =
'. $friend->id .')')
                ->order by('chat.time', 'desc')
                ->limit(100)
                ->get()
                ->result();
            $result = array(
                'name' => $friend->name,
                'chats' => $chats
            );
            echo json encode($result);
        }
    public function sendMessage()
        $this->db->insert('chat', array(
            'message' => htmlentities($this->input->post('message', true)),
            'send to' => $this->input->post('chatWith'),
            'send by' => $this->user->id
        ));
   }
}
```

Untuk urusan dalam directori Controller sudah kita selesaikan, namun bagaiman tampilanya? untuk melakukan rekayasa tapilan nya kita sekarang menuju directori View , dimana directori ini akan menampilkan requst dari sebuahsistem codeigniter yang diminta user nantinya, dan di berikan oleh controller.

Untuk membuat halaman depan / halaman login kita menggunakan fil Welcome.php pada controller dan membuat sebuah file pada direktori **View** dengan nama file **Login.php** untuk isi dari file ini dapat dicopas code dibawah ini :

```
defined('BASEPATH') OR exit('No direct script access allowed');
?><!DOCTYPE html>
<html lang="en">
<head>
   <meta charset="utf-8">
   <title>Welcome to CodeIgniter</title>
   <script
                         type="text/javascript"
                                                               src="<?=
base_url('assets/jquery.min.js') ?>"></script>
    _
<link
           href="<?= base url('assets/css/bootstrap.min.css')</pre>
                                                                    ?>"
rel="stylesheet">
   <link href="<?= base url('assets/css/style.css') ?>" rel="stylesheet">
   <script
                src="<?=
                          base url('assets/js/jquery-1.11.3.min.js')
?>"></script>
   <script src="<?= base url('assets/js/bootstrap.min.js') ?>"></script>
</head>
<body>
<div class="container">
   <div class="row">
       <div class="col-md-12">
           <header>
              <img width='100%' src="<?= base url('assets/header.jpg')</pre>
?>"><br>
           </header>
       </div>
   </div>
   <div class="row">
       <div class="col-md-8"><br/>
               <article>
                  Welcom Chating CodeIgniter | Selamat menikmati
komunitas COdepedia Sistem. DIsini anda dapat berinteraksi menggunakan
layanan Chating ini,
                                                  CMS

                      <i>Username: <b>delia </b> dan Password: <b>mark </b> </i> 
                  </111>
               </article>
       </div>
```

```
<div class="col-md-4"><br/>
         <article>
            <div class="alert alert-info">
                <strong>Login Chat</strong>
            </div>
            <?= form open() ?>
            <td
                                  width='30%'>Username<?=</pre>
form input(array('name' => 'username', 'placeholder' => 'Username', 'class'
=> 'form-control')) ?>
            Password<?= form password(array('name' =>
'password', 'placeholder' => 'Password', 'autocomplete' => 'new-password',
'class' => 'form-control')) ?>
            <td
                                     colspan='2'class='right'><?=</pre>
                     => 'Login','class' => 'btn btn-info'))
form submit(array('value')
?>
            <?= form close() ?>
         </article>
         </aside>
      </div>
   </div>
   <div class="row">
      <div class="col-md-12">
         <footer class="well">Copyright &copy;
                                               2016 <b>-</b>
'CodeIgniter Version <strong>' . CI VERSION . '</strong>' : ''
?></footer>
      </div>
   </div>
</div>
</body>
</html>
```

Nah lanjut untuk tampilan halaman chate maupun halaman dimana member melakukan aktivitas chate atar member dan kita buat kembali sebuah file dengan nama chat_dashboard.php, untuk source codenya seperti dibawah ini:

```
<*?php
defined('BASEPATH') OR exit('No direct script access allowed');
?><!DOCTYPE html>
<html lang="en">
<head>
   <meta charset="utf-8">
   <title>Chat Dashboard</title>
                                                              href="<?=
   link
            rel="stylesheet"
                                       type="text/css"
base url('assets/styles.css') ?>">
                          type="text/javascript"
                                                               src="<?=
   <script
base url('assets/jquery.min.js') ?>"></script>
```

```
href="<?=
    link
                          base url('assets/css/bootstrap.min.css')
                                                                      2>11
rel="stylesheet">
    <link href="<?= base url('assets/css/style.css') ?>" rel="stylesheet">
    <script
                 src="<?=
                                base url('assets/js/jquery-1.11.3.min.js')
?>"></script>
    <script src="<?= base url('assets/js/bootstrap.min.js') ?>"></script>
<body>
<div class="container">
    <div class="row">
       <div class="col-md-12">
           <header>
               <img width='100%' src="<?= base url('assets/header.jpg')</pre>
?>"><br>
               <nav class="navbar navbar-default navbar-default">
                       <div class="navbar-header">
                           <button type="button"</pre>
                                                     class="navbar-toggle
collapsed"
               data-toggle="collapse"
                                        data-target="#navbar"
expanded="false" aria-controls="navbar">
                                                    class="sr-only">Toggle
                               <span
navigation
                               <span class="icon-bar"></span>
                               <span class="icon-bar"></span>
                               <span class="icon-bar"></span>
                           </button>
                       </div>
                       <div id="navbar" class="navbar-collapse collapse">
                           <a
                                         href=""><i
                                                         class="glyphicon
glyphicon-home"></i> Home</a>
                               <a href="<?= site url('welcome/logout')</pre>
?>"><i class="glyphicon glyphicon-lock"></i> Log-Out</a>
                               <a
                                         href=""><i
                                                         class="glyphicon
glyphicon-globe"></i> Your : <?= $this->agent->browser().' '.$this->agent-
>version() ?></a>
                           </div>
               </nav>
           </header>
       </div>
    </div>
    <div class="row">
        <div class="col-md-8">
               <div class="alert alert-info">
                   <strong> <i class="glyphicon glyphicon-user"></i>
          datang
                      style='color:red;'><?= $this->user->name ?></b>
Selamat
                  <b
...!</strong>
               </div>
               <div class="list-group">
                   <?php foreach ($teman->result() as $item) { ?>
                           <a href="javascript:;" data-friend="<?= $item-</pre>
>id ?>" class="list-group-item"> <?= $item->name ?> <b class='btn btn-info</pre>
btn-xs'><em class="glyphicon glyphicon-user"></em> Chating Now</b></a>
                   <?php } ?>
               </div>
```

```
</div>
       <div class="col-md-4">
          <aside class="widgets">
              <div class="row">
                  <div class="col-lg-12">
                            class="input-group"><input
class="form-control" placeholder="Search for..."> <span class="input-group-
btn"><button
                              class="btn
